

(11 marks)

One workplace with 100 employees is planning to introduce a new software system called Lisen. Before Lisen is introduced, a small number of employees will undergo training to become skilled at using it. These employees will be ‘initially skilled’ at using Lisen, and will support others in the workplace to become skilled at using it.

$$N = \frac{100}{1 + 9e^{-0.4t}}$$
